

IT Definitions for the IRRIphone System

In order to use the **IRRIphone System** over the **WEB** or via **WAP** mobile phones, for remote access via the **IRRIphone** server to the Motorola ICC System (Client Computer) the following communications settings are required:

Routing:

1. The Client Computer should be connected to the internet via a legal internet IP address. The IP address does NOT have to be static.
2. Client Computers connected via a **Local / Office Network** should be routed to a **Static** legal IP address.
3. If the Client Computer does not have a legal IP internet address, it is possible to define a **Static Routing** for a specific port.

4. Firewall Definitions:

1. In order to secure the Client Computer, firewall should allow **IN** and **OUT** access for the following IP: **212.199.160.161.**

2. Port Definitions:

- a. **Port 8888** must be opened in the firewall / router for access **TO** the Client computer (for **HTTP**).
- b. **Port 80** (Internet Access) must be opened **FROM** the Client Computer for **HTTP** Access.
